

SECURING

Web & Cloud App Generation

SECURITY TESTING

Apptroops testing combines the power of machine learning & human intelligence by our certified researchers following the latest security standards which includes OWASP Top 10, SANS 25

With a key focus on areas such as Network security, Mobile Application Security, Web Application Security, Cloud Application Security & Source code review. Our security test lifecycle make your application secure.

With Apptroops, you would not need to hire an in-house staff to watch over your security. You will have the time to do your business spontaneously guiding all your staff to other productive needs because we are here to secure your networks.

RED TEAMING

Apptroops Red Team Assessment offers complete coverage to identify the real world threats & critical flaws against organizations' information assets including its staff.

We make sure to prepare a multi-pronged & holistic attack strategy to assess the state of our client's information security from a real hacker's perspective & prepare a comprehensive report on both strategic & tactical levels which can be utilized to safeguard the business from cyber attacks.

Red Team Attack Surface

Apptroops Challenge

- Staff awareness towards social engineering
- Open source intelligence footprints
- opensource intelligence footprints
- Staff awareness towards social engineering

APPTROOPS SERVICES

Apptroops possesses rich expertise in Security Testing of enterprise applications, creating to diversified business needs. Our experts Pen Testers have immense experience in serving clients across different industry verticals & organization sizes.

WHAT MAKES APPTROOPS STAND OUT !

Highest Direction Rate

Minimal False Positives

Reset After Fix

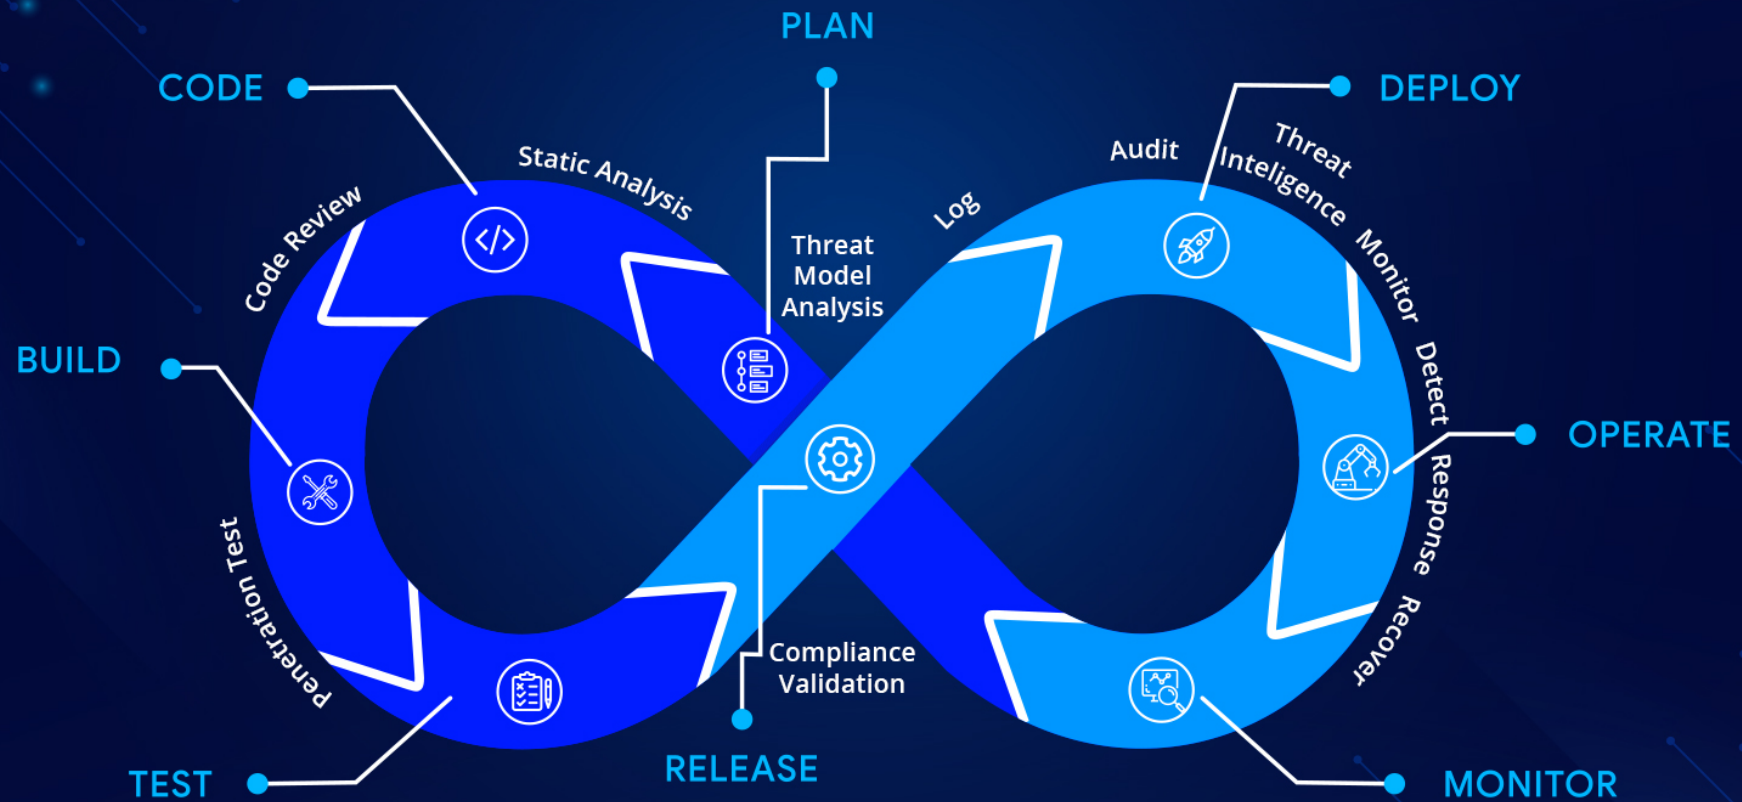

Quick Turnaround Time

Valuable Report

Mitigation Support

DevSecOps

The DevSecOps approach coordinates Development and Operations with Security Operations, embedding security rehearses into the product improvement and tasks lifecycle. **DevSecOps** incorporates security into every step of the development process

vCISO

A Virtual CISO assumes a similar job as a full-time CISO would, however in a more cost-effective way. Dealing with security on present moment or constrained commitment, they will give strategy, guidance, and oversight.

Roles & Responsibilities of a vCISO:

Control Proper Security Systems

Information Security Management

Audit & approve security arrangements

Manage Current Internal Security

APPTROOPS FEATURES

VERIFICATION STANDARDS

SAST DAST

Intelligent Automation of testing

- Built-in Vulnerability Scanner
- Advanced Algorithms with Apptroops more than 1000+ test cases

Machine Learning Technology

MAST

Human Testing of Application Logic

- Pool of certified ethical hackers
- Red Teaming
- Apptroop - CERT

Human Intelligence

OWASP Top 10
STAN Top 25
WASC

APPTROOPS EXTRAS:-

Industry's most advanced SQL Injection & cross-site scripting testing

Advanced Automated DOM-based XSS Vulnerability Testing

Scan for over 1000 vulnerable-Word Press

Plug-in & misconfigurations

Apptroops helps the universities, colleges, and schools to understand and address problems in their cyber security as well as proactively detect and remediate threats when they occur.

Our professionals have a deep understanding of latest security techniques, resulting in a better protection from information technology threats.

Apptroops's solutions assist healthcare to prevent fraud, decrease costs, and improve patients' experience while protecting their privacy and the brand's reputation of the healthcare organization.

Apptroops's team helps the clients communicate safely via secure VPN connections. We have an experienced technical team that assists you in devising and implementing the appropriate security systems

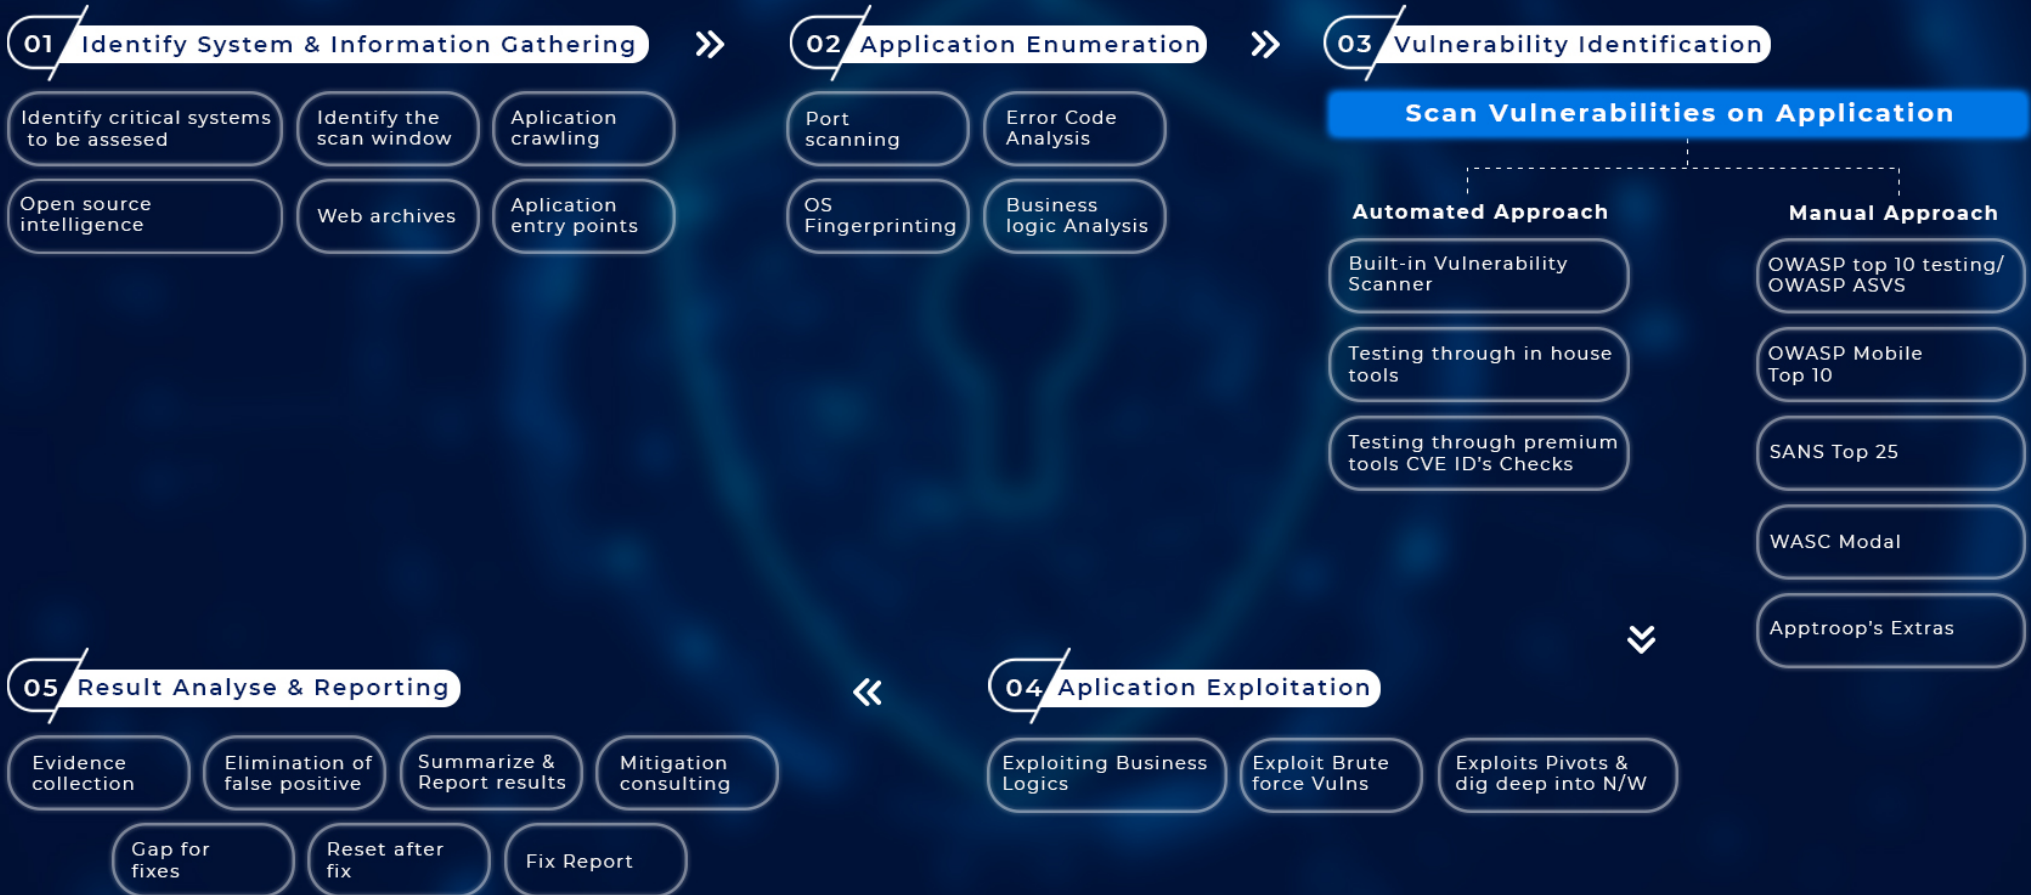

Apptroops solutions help organizations to detect and defend against exploit and advanced attacks that bypass their traditional security measures

At apptroops, our developers carry out the complete Risk analysis that represents how the security breach can affect the business. Our highly trained professionals help you understand where the security execution is absolutely essential.

APPTROOPS INDUSTRIES

OUR APPROACH & PROCESS

Apptroops Methodology provides identification of vulnerabilities & hence ensures the security of your applications. A five-phase process that ensures an effective & efficient Security test.

OUR SECURITY TESTING FRAMEWORK

Components of our Framework:

Components of our Built-in Scanner:

Security tools employed

We use HP Inspect, IBM App Scan, HP Fortify, Veracode, Burp Suit Pro & other open source tools.

Valuable Report

Our report makes sure that the clients get a clear picture of root findings, critical assessments, snapshots etc. with recommended remediation.

APPTROOPS SERVICES

Apptroops possesses rich expertise in Security Testing of enterprise applications, creating to diversified business needs. Our experts Pen Testers have immense experience in serving clients across different industry verticals & organization sizes

Mobile Wallet App

- Protect content data, customer information and brand reputation
- Monitor internal network 24/7

We suggested cost effective riskmitigation measures with minimum interruption.

SaaS Based Startup

- Huge dataset with confidential customer information
- Distributed, global workforce
- Protect against constantly evolving and insider threat

By conducting thorough security testsand identifying vulnerabilities, Apptroopsreduced the client's risk and suggestedcost-effective risk-mitigation measures

Insurance Company

- Gain complete visibility into network
- Protect against sophisticated and rapidly-evolving cyber-attacks

Apptroops has discovered 4 Critical security Issues and 8 High Category Issues, Apptroops minimized security risks by assessing the customer'sinfrastructure vulnerabilities as well and recommended solutions with proven methods to enhance security

OUR LOCATION

📍 F 245, Phase 8B, Industrial Area, Mohali,
Sahibzada Ajit Singh Nagar, Punjab 160070, India

📍 39899 Balentine Dr, Newark, CA 94560, USA
